

Damaged Files in CAMEOfm

Problem description:

CAMEOfm or one of its modules will not open. The following error message, which contains the name of the damaged module, will appear:

The damage will permanently prevent access to the damaged module unless it is repaired.

Repairing damaged files:

The CAMEOfm runtime application does not contain the tools needed to effect repairs to damaged data modules.

Damaged CAMEOfm modules can generally be repaired using the Recover utility on the File pull-down menu in the complete version of FileMaker Pro.

If you do not have access to the full FileMaker Pro, repair service is available through <http://www.CAMEOSupport.com>.

Avoiding the problem:

The best way to avoid the problem is to have a full backup of your CAMEOfm software. Another option is shown in CAMEOfm Tip Sheet no. 2, "Safeguarding Your Data in CAMEOfm."
