

Safeguarding Your Data in CAMEOfm

CAMEOfm

CAMEOfm has NO security. This means that anyone with access to your computer can alter or even delete your data. To guard against this, you should use the “*Import\Export*” function on the CAMEOfm File menu to make a backup whenever you enter new data. Select File>Import\Export>Export>Export ALL CAMEO data. Assign the Backup file a name that clearly identifies it, e.g., CAMEO_Backup_12_31_02.zip and keep it in a secure location. Data can be restored using CAMEOfm’s Import function.

MARPLOT

Like CAMEOfm, **MARPLOT has NO security.** To protect your map location data, you should make a backup copy of your map layers. The simplest way to do this is to make a copy of the entire contents of the folder named X:\CAMEO\CAMEOMAP (where X: is the drive letter of the drive where CAMEOfm is installed). Keep these files with your CAMEOfm backup file.
